

ROBOTIC VACUUM LINE

Maytronics Robotic Vacuum Line

Maytronics has been making robotic pool cleaners for longer than just about anyone else and it shows in the attention to the finer details of operation. All units are zero depth compatible and come with a tangle free swivel cord. There are two major lines which are the Wave line and the Classic line.

The Wave line carries the better warranty of 36 months or 3000 hours of use, the new gyroscopic motor and has remote controls for superior operation. There are options that will fit all pools from a large hotel pool to the largest Olympic competition facility. The 200XL even includes the option of self entry and emergence as well as programmable cleaning paths.

The Classic line is as it has been for years and compatible with many of the units out in the marketplace from a part perspective. They are proven in the field over more than 10 years in their current configuration.

Simply choose the cycle time, cord length and control method on the robot that is best sized for you pool. Feel free to call for advice if you need any help choosing a model for you facility.

Dolphin HD by Maytronics
