Item No	Size	Per Unit	10+	Pallet Lot of 39
13 07 50	25 LB	\$67.75	\$60.85 @	\$2,215.60

DE Filter Tips

- Good precoats are essential to getting flow, clarity and keeping elements clean.
- Normal dosage is 2 ounces of DE per square foot of filter area, or follow manufacturers precoat dosage instruction.
- Object is to deposit at least 1/16" over all parts of filter elements.
- Precoat flow rate should be no more than 1 US gallon per square foot of filter area.
- Maximum filter flow rate should be no more than 2 USGPM per square foot, and preferably in the range of 1 to 1.5 USGPM per square foot.
- Check filter elements for spots not covered by precoat. This normally indicates body oils of grease or mineral staining on the elements which should be cleaned off or it will affect flow and length of filter cycles.
- Check regularly for warped or broken filter elements and repair as required to maintain filter performance and prevent filter media from leaking into pool.

Dryden Aqua Activated Filter Media

This is made of crushed green and amber glass, sized and activated, and used to replace sand as a permanent media. Multiply the current sand or gravel weight by 0.85 to determine amount needed, no filter modifications required, and note the backwash rate required is 18usgpm/square foot.

Item No	Description	Size	Per Unit	15+	Pallet lots of 45
