BUTTERFLY VALVES

These are very sturdy, high quality valves at a reasonable price. Two models are available. Wafer style valves are designed to fit between two flanges, being held in place by long bolts that go from flange to flange, capturing the valve in the middle. The bolt patterns of all flanges and valves are an industrial standard so everything matches. The second model is Lug style, where the valve is designed to be bolted to each flange separately. Each bolt hole is threaded in the valve so that each flange can be removed independently without disturbing the valve. Plumbing can be removed from either side independently while the other side is still attached and in use. The valve bodies are all cast iron. They have a seat or gasket that forms the flange gasket on either side and runs continuously through the body, forming the seat gasket as well. This prevents any liquid from coming into contact with the cast iron body. The shafts are 410 stainless steel with EPDM shaft seals, and the discs are aluminum bronze. Lever handles are supplied on valves up to 8", larger valves are gear actuated.
