**D.E. FILTER PARTS**

**D.E. Filter System Tips**

- Good precoats are essential to getting clarity and to keeping septa clean
- Normal dosage is 2 ounces per sq .ft. of filter area
- Object is to deposit at least 1/16" over all parts of all element
- Precoat filter at 1 U.S. GPM per sq. ft. of filter area
- Maximum flow rate for filtration is 2 U.S. GPM per sq. ft. however 1 -1.5 GPM is better
- Check for grease, metal staining, body oils, and other discolourations on filter elements. Buildup of dirt will shorten your filter cycles clean bags as required with filter free see page 49
- Check for warped or broken elements on a regular basis
