

D.E. FILTER PARTS

D.E. Filter System Tips

- Good precoats are essential to getting clarity and to keeping septa clean.
- Normal dosage is 2 ounces per sq .ft. of filter area.
- Object is to deposit at least 1/16" over all parts of all element.
- Precoat filter at 1 U.S. GPM per sq. ft. of filter area.
- Maximum flow rate for filtration is 2 U.S. GPM per sq. ft. however 1 -1.5 GPM is better.
- Check for grease, metal staining, body oils, and other discolourations on filter elements. Buildup of dirt will shorten filter cycles.
- Check for warped or broken elements on a regular basis.
