

DECK & CHANGE ROOM DRAINAGE

Mini Channel Drainage System

Mini channel is used in many facilities on deck and/or in change rooms for drainage of wastewater. The channel (imbedded in concrete floor) is a molded polyurethane molded with honeycomb structure for strength and durability. Channel, 45's, adapters to connect to piping are each bought separately as required to configure a given system.

Top grating is supplied in 3' sections in various colors as required for new applications and to replace damaged or worn grates.
