

Vortex offers a complete line of water features for aquatic centres, Splashpads® and urban spaces.

With over 200 different stand-alone spray features and the ability to create a custom elevation structure for your facility, there is a solution to suit your facility, budget and goals.

Vortex Structures and Features

Vortex is a world class manufacturer with over 6000 projects worldwide. Manufactured in Montreal, Vortex features and structures are built for safe and reliable play. 304/304L/316 stainless steel and lead free brass are used to provide both structural strength and corrosion resistance. These materials are used in anchoring systems as well. All features are built for low maintenance and a long life.

New features can be integrated into a new pool construction project, or can replace existing old structures.

Today's water features and elevations add tremendous play value and aesthetics to your centre. Safety is prioritized throughout the design and engineering process. All Vortex features and elevation structures meet or exceeds ASTM and CSA standards.

Renovations & Retrofit

If your feature is more than 10 years old, a new structure can bring new interest to your centre, by increasing play value and visual aesthetics. Using existing water supply piping an installation of a new structure is straight forward for most pools and with planning, can even be completed in a shutdown.

Spin 'N' Splash Features.

Spin 'N' Splash

Spin 'N' Splash are highly interactive features that do not require plumbing. They are designed to draw water up from the pool, when the user spins the wheel on the hand pump.

To install, these features require 6" - 20" water depth to install and a concrete substrate for bolt-down.

The Spin 'N' Splash features are an easy upgrade to your facility.

Sample Rendering.

Splashpads®

A Splashpad®, also known as a spray park, is an interactive zero depth entertainment area that promotes healthy, inclusive, risk-free dynamic play for the young at heart. We can design a splashpad to fit any space, from small parks or urban spaces to large recreational areas. They are quickly becoming one of the top most requested amenities for communities around the world.

Services

Design, and engineering expertise is available to you for your retrofit or new build project. We can help with planning including: product selection, design, product cut sheets, installation information, written specifications, sample renderings and autocad files of features to incorporate into your design.
